###001:

Structure combine data items of different types.

As in our project, passenger needs to give some data in different types to purchase ticket, here we use structure named "struct ticketInfo{…}ti;"

struct ticketInfo{…}ti : It includes 6 int type member/variable and a char type array.

###002:

Void stationList(){…} : It includes 30 stations that needed to display as station list to choose departure and arrival station number.

###003:

Void clrscr(){..} : It is a user defined function to clear DOS mode screen.

###004:

int KiwiExpressCounter(){…} : It's used as home screen of KiwiExpress Rail System. It is an int type function that returns menu number.
